

Satoshi Era ExtraNonce Protocol v1.4 Forensic Audit Report

Lead Researcher: QAHTAN AL OUD
Role: Strategic Cybersecurity Consultant & Security Researcher
Email: qahtanbins1@gmail.com
Audit Scope: Bitcoin Mainnet Blocks 1 to 10,000
Audit Status: VALIDATED / PASS (Attempt 03 Officially Closed)

1. Executive Summary & Historical Discovery

This document represents the formal, forensically verified execution audit of Bitcoin coinbase **ExtraNonce** values across blocks 1 to 10,000. Under Protocol v1.4 logic (CBigNum::getvch), the analysis isolated **78 deterministic boundary anomalies** caused by signed-integer shifts in early CBigNum serialization. This report and its attached cryptographic verification suite provide an immutable baseline for Genesis-era mining pattern attribution.

2. Key Audit Metrics

Metric Category	Value
Total Chain Scope	10,000 Blocks (1 to 10,000)
Conforming Blocks	9,922 Blocks
Non-Conforming Boundary Cases	78 Blocks
Execution / Parsing Errors	0 Errors
Verification Integrity Status	100% PASS (9,922 + 78 = 10,000)

3. Cryptographic Proof of Intellectual Property (SHA-256)
